

Summative Assessment

Unit 5 Reproduction

Handwritten in red:
A-7
B

MYP Year - 3

Grade: 7

Statement of Inquiry: Reproduction is due to interactions of organisms with their environment and with members of the species and as a consequence, produces form with modifications.

Key Concepts- Change

Related Concepts- Form, Function, and Balance

Global context: Identities and Relationships

Date of Submission:

ahoon shokeen 7a

Assessment Type:

2026-01-30

Formative	
Summative	*

Assessment Criteria

Criterion A: Inquiring and designing - Maximum: 8

At the end of year 2

, students should be able to:

- describe scientific knowledge
- apply scientific knowledge and understanding to solve problems set in familiar and unfamiliar situations
- analyze information to make scientifically supported judgments

Section A (Multiple choice questions) Ai (1-2)

Q1. State type of reproduction that involves only one parent?

- a) Sexual
- ☒ b) Asexual
- c) Fertilization
- d) Pollination

Q2. Identify The male gamete in humans is:

- a) Ovum
- b) Zygote
- ☒ c) Sperm
- d) Embryo

Q3. Identify part of a flower that produces pollen?

- a) Stigma
- b) Ovary
- ☒ c) Anther
- d) Style

Q4. Define Pollination is:

- a) Fusion of gametes
- ☒ b) Transfer of pollen grains to stigma
- c) Seed formation
- d) Growth of pollen tube

A-10

Q5. Identify

A zygote is formed after:

- a) Pollination
- b) Germination
- ☒ c) Fertilization
- d) Budding

Section B

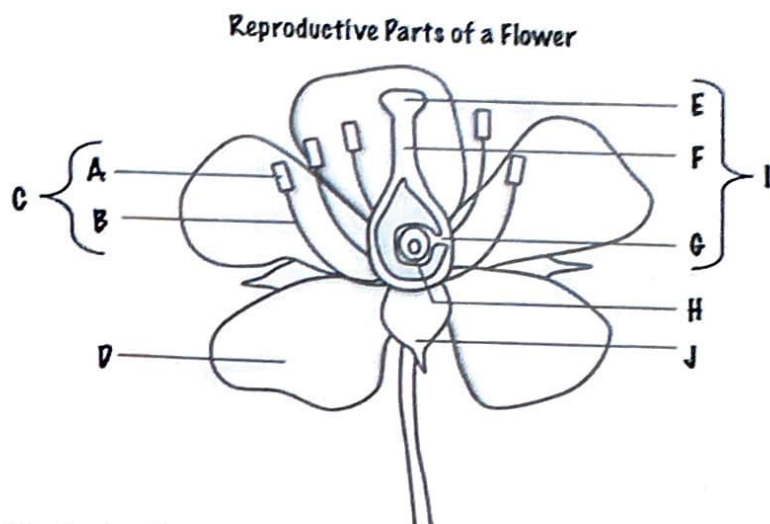

Q6. Compare asexual and sexual reproduction using examples. Aii (3-4)

Q7. A farmer grows plants using runners. (Aii 5-6)

- a) Identify the type of reproduction
- b) Suggest one advantage
- c) Suggest one limitation

Q8 . Draw and label the diagram of the male gamete in human. (Aii 5-6)

Q9 An image is given below. Do refer to the same to answer the below questions. (Aiii 7-8)

Using the above diagram, match the correct part to its letter

- | | |
|--------------------|----------------------|
| 1. <u>E</u> Stigma | 6. <u>B</u> Filament |
| 2. <u>D</u> Petal | 7. <u>C</u> Stamen |
| 3. <u>H</u> Ovule | 8. <u>I</u> Pistil |
| 4. <u>A</u> Anther | 9. <u>F</u> Style |
| 5. <u>G</u> Ovary | 10. <u>J</u> Sepal |

11. List ALL of the male reproductive parts	12. List ALL of the female reproductive parts
<u>Anther, filament</u> <u>stamen</u>	<u>Stigma, style, ovary,</u> <u>ovule</u> <u>carpel/pistil</u>

A-7

Unit 5 — summative criterion A

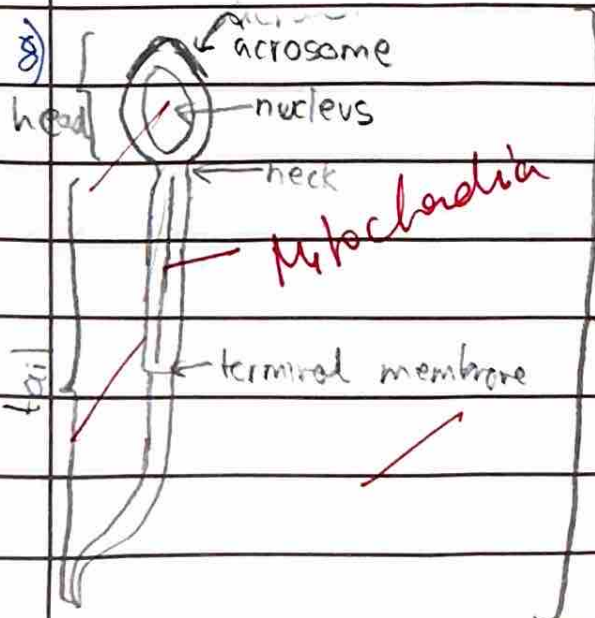

aspect: 6)	Asexual	Sexual
no. of parents	1 (itself) 1 Parent	2 (male and female of the same species)
genetic variation	none (identical children are more prone to dying from the same diseases because of the lack of mutations)	a lot (the chromosomes of the male and female combine in unique ways. It also increases the ^{chance of} mutations)
speed	can be quick and fast, and produce lots of offspring easily	slow and a maximum of 2 children per pregnancy (at least for humans)
examples	potato, ginger, onion	humans, hibiscus, cat

Examples of asexual reproduction.

7a) Runners are a form of asexual reproduction, because they need only 1 parent — they branch ~~for~~ off the parent plant.

7b) An advantage is speed: runners can be grown quickly and efficiently.

7c) If a disease affects 1 of them, because the plants are all connected, they shall suffer from the same disease and likely die.

1) diag much to be bigger
2) label — all not done

A-2
